

# LIBERTY HEALTHCARE

COMFORT - MOBILITY - INDEPENDENCE

## UltraLow - Adjustable Beds

Liberty Healthcare **Manufactures the UltraLow Adjustable Bed in Australia**, to suit the individual situation and desired goals of its customers. As every person is different in weight, height and needs, we believe it is vital to script the bed to meet their unique requirements. The UltraLow Adjustable Bed is ideal for people with a disability, to provide greater independence, ease of positioning whilst in the bed, safely transfer in and out of the bed, all the while looking stylish in any home care setting.

There are many **benefits** with having an adjustable bed.

- Having the ability to **elevate your head** may improve postural support, ease symptoms of reflux, respiratory conditions, snoring and sleep apnoea. **Raising your legs** will assist with circulation and helps with tired, swollen or painful limbs.
- By elevating both head and leg elevations, a position commonly known as **Zero Gravity**, the end user can relieve pressure on sore joints, reduce body surface compression and generally relax muscles to achieve a restful state.
- The **Hi-lo function** is useful for both the end user and carer. This function essentially raises the whole bed to a suitable height and enables for 'stepping off' the bed by the end user at a suitable height for them. Hi-lo also assists when making the bed and cleaning under the bed, giving further independence to the end user.

### Customisation/Scripting

Every Liberty bed is scripted by one of our Equipment Specialists. During the scripting process, one of the key points to measure and document is the correct height for the person sitting on the side of the bed ('beds resting position'). This is crucial for safe transfer onto and off the bed, in situations involving wheelchairs, hoists and other equipment. Bed-lengths is another important area often overlooked, at *Liberty Healthcare* we can manufacture all our adjustable beds up to 2335mm (7'6") to accommodate for tall and very tall end users.

### Bed Frame and Base Platform

Our bed frame is constructed entirely in **Quality Steel** with the UltraLow frame manufactured to position the bed base lower to the ground than our other models. Lowest possible configuration height is 210mm (frame too low for hoist clearance at this height). This suits better for transfers to wheelchairs or those that are petite in height. The base platform is padded with optional depths of 25mm/50mm/100mm depending on the transfer height required.

### Bed Functionality Options

Head Raise

Leg Raise

Zero Gravity

Flat

Hi-Lo

Massage

### European Electric

Liberty Healthcare has partnered with the world's leading providers of **European Electrics** for adjustable beds. European engineered quality provides peace-of-mind and the reliability we all seek. Spare parts are readily available should they ever be required. Our service technicians are fully trained to service and maintain all beds in our range.

### Variable Lockable Castor Options

All our adjustable beds are supported by **Superior Grade**, non-marking, high shock absorption lockable castors. These are available in the following sizes: 50mm/75mm/100mm/125mm also providing the option of feet for those not requiring the bed to move.

### Handsets & Bed Control

Liberty Healthcare provide both **corded and cordless** remote controls. The cordless remote also offers memory settings, under bed lighting, plus, the ability to connect via a smart phone to operate bed functions.

### Companion Bed Compatibility

We offer **non-electric companion beds** manufactured with the same quality steel frame, padded platform base, and sturdy lockable castors. All our split-bed designs are scripted to be at the same height (from floor to top of mattress) even if the beds have different functionality. When we manufacture our Split-Beds we also take into consideration any differences in depths of mattresses required by the end user and their partner.

### Standard Bed Sizes Available for Homecare/Ultra Low

760mm

915mm

1070mm

### Specification

Safe working Load

Narrow Single Long / Single / King Single – 200kilos

Hilo Movement - 290mm from resting position
